## **Roof Testing Laboratory**

## Roof System Dynamic Wind Uplift Resistance Results

File Numbers:	SOPI-016-059-200
	SOPI-016-059-600
	SOPI-016-059-700
Test Dates:	2008-04-03 / 2008-12-16 / 2008-06-19
Publication Date:	2012-01-12
Revision Dates:	2015-06-23 (R1)
	2017-05-23 (R2)
Reappraisal Date:	2020-05-23

# MOD-BIT XPRESS BOARD HD SYSTEM (MARS) MECHANICALLY ATTACHED ROOFING SYSTEM

### **Roofing System Summary**

Cap sheet membrane:	Modified bitumen membrane / Torch applied
Base sheet membrane:	N/A
Cover board:	Composite board consisting of a bitumen membrane with a rockwool board
	914 x 2438 x 12,7 mm (3' x 8' x ½") / Mechanically fastened
Insulation:	Rigid polyisocyanurate foam insulation board 1220 x 1220 x 38 mm (4' x 4' x 1½") / Loose laid
Vapor barrier:	Self-adhering membrane
Thermal barrier:	Optional
Decking:	Steel deck

### Dynamic Uplift Resistance (DUR) as per CSA A123.21

System Designation	Measured Value	Computed Value (To Include 1.5 Experimental Factor)
Α	-2,9 kPa (-60 psf)	-1,9 kPa (-40 psf)
В	-4,8 kPa (-100 psf)	-3,2 kPa (-67 psf)
С	-7,2 kPa (-150 psf)	-4,8 kPa (-100 psf)

### **Roof System Dynamic Wind Uplift Resistance Results**

SOPI-016-059-200 / SOPI-016-059-600 / SOPI-016-059-700

### **General Notes**

### 1. Decking:

Tests were performed over a standard roll formed steel deck profile, with a galvanized or aluminum / zinc alloy coating finished, as per ASTM A653, A792, A1008 or CSSBI 10M standards, bearing a thickness of 0.76 mm (0.03 inch) minimum (commonly defined as 22 gauge), corresponding to the ASTM A653M grade SS 230, having a yield point of 230 MPa (33 ksi) and a tensile strength of 310 MPa (45 Ksi). The tests could also be performed on concrete deck or standard 4' x 8' x 5/8" plywood deck.

The deck's fastening to the supporting structure must be strong enough to resist wind uplift loads (as defined per NBC requirements).

### 2. Deck equivalency products:

18 to 22 gage steel deck. Wood or concrete deck which testing gave equivalent or superior uplift resistance than the value specified in the "Fasteners Pull Out Resistance" section.

#### 3. Fasteners Pull Out Resistance:

Testing were conducted in laboratory according to ANSI/SPRI FX-1 2011 standard, over a minimum of 10 test samples on a *Com-Ten* apparatus over steel deck (unless stated otherwise).

#### 4. Adhesive Pull Resistance:

Testing were conducted in laboratory over 3 test samples, according to ANSI/SPRI IA-1 2010 standard on a Com-Ten apparatus over steel deck (unless stated otherwise) or, according to ASTM D1623 standard over a universal press testing bench, for in-between materials.

#### 5. Note on adhesive:

Follow all guide lines or supplementary instructions from the manufacturer regarding adhesive application.

#### 6. Equivalent products:

Only the products listed in this report under eligible products are deemed acceptable as substitute to the tested products. Any other modifications must be requested in written, on exp application form, to be studied for approval.

#### 7. Optional components:

Any components of this roofing system listed as optional, may be removed from the roof design. Inclusion or exclusion of the said component having no effect on the published dynamic uplift resistance results. (DUR).

### 8. Experimental factor:

In accordance with CSA A123.21 standard, the published dynamic uplift resistance (DUR) include a computed experimental factor of 1,5.

#### 9. Building Wind Load Calculation:

An online calculator is available at http://www.exp.com/fr/rooftesting.

The calculator will compute, the Wind Load of any given building, for field, perimeter and corners, as per 2015 CNB requirement, without experimental factor. It will also compute perimeter's and corner's zone dimensions.
